Summary

Senior backend engineer with 8+ years building data-intensive Python systems in ad tech and e-commerce. Especially enjoy infrastructure work: data platform migrations, task orchestration, CI/CD and deploy speed, and automated dependency management.

Experience

Senior Software Engineer

January 2021 – Present

Innovid | Chicago, IL (Remote)

- Built and scaled audience ingestion and distribution pipelines processing hundreds of millions of records daily across Meta, TikTok, TransUnion and Experian, using delta uploads to cut Snowflake ingestion costs by ~90%.
- Co-designed a Celery/RabbitMQ task orchestration framework (dispatcher, fan-out pipelines, idempotency, failure hooks, telemetry) and built Meta and TikTok audience distribution pipelines on it covering create, batched upload, polling, deletion and refresh.
- Migrated a ~10 TB data ingestion process from MySQL to Snowflake, cutting each quarterly run by ~4 days.
- Drove infrastructure, tooling and security improvements: cut deploy times from ~10 to 2.5 minutes, migrated all tooling to uv, automated biweekly dependency upgrades with a custom Claude Code skill, reduced served HTTP asset size by 70% with zstd compression and migrated Snowflake auth to key-pair JWT.
- Mentored and onboarded new engineers through pairing, code review and a streamlined local dev setup so they could ship in their first week.

Software Developer

July 2018 – June 2020

Tradebyte Software GmbH | Ansbach, Germany

- Built and optimized e-commerce enterprise applications serving hundreds of clients and moving millions of products daily, including migrating services to AWS to increase throughput and reduce cost.
- Authored technical documentation adopted across teams, cutting developer onboarding time and repeated support requests.
- Presented enterprise applications at the company's annual conference (ECD 2019) and to internal teams.

Skills

Backend & Frameworks	Python, FastAPI, Django, SQLAlchemy, Alembic, Pydantic, Celery, asyncio
Data & Storage	PostgreSQL, Snowflake, MySQL/MariaDB, Redis, MongoDB, ETL/ELT pipelines
Cloud & Infrastructure	AWS (S3, SQS, ECS, ECR, RDS), Docker, Terraform, Kubernetes, Helm, Linux, Bash
APIs & Security	REST, OpenAPI/Swagger, OAuth2/OIDC, JWT, Auth0
Quality & Delivery	pytest, ruff, mypy, uv, Git, GitHub Actions, CI/CD, Agile/JIRA, Sentry, Dependabot
AI-Assisted Development	Claude Code, Cursor, Claude Skills, MCP servers, multi-agent workflows
Ad Tech Integrations	Meta Marketing API, TikTok, Adobe, TransUnion, Experian, LiveRamp

Education

Columbia University | New York, NY | B.S. in Computer Science

May 2017

Languages: English (native), German (advanced), Spanish (basic) • U.S. and German citizen
